Protections

Protection	description
Over temperature protection	Could recover automatically; Bare plate test when the IC temperature is greater than 100 ± 3 C, the output power gradually decreases as the IC temperature increases.
Input under-pressure protection	When the input voltage is less than 180 Vac, the output power gradually decreases with the decrease of the input voltage.
Output overload protection	Overload protection is triggered when the load voltage is greater than 500 ± 5 Vdc; Protection mode: hiccup restart, which can be automatically restored after the load abnormal conditions are removed.
Output short circuit protection	Hiccup mode; it can be automatically restored after the abnormal conditions are removed.

Note:

1. Unless otherwise specified, all parameters should be measured at the condition of 230Vac (50Hz) input ,with rated load ,and ambient temperature of 25°C;
2. Including setting error, linear adjustment rate and load adjustment rate;
